

# Global Vaccination Information

Past editions of *Epidemiology & Prevention of Vaccine-Preventable Diseases* have included tables showing the routine childhood vaccination schedules for many countries of the world, and information about vaccination coverage in selected countries.

Since this information can quickly become dated, we now refer readers to two very informative pages on the World Health Organization's website:

## **Statistics and Graphics**

(<http://www.who.int/vaccines-surveillance/StatsAndGraphs.htm>)

This page contains links to slides, maps, tables, and other documents relating to global and national disease incidence, vaccine coverage, and other immunization-related information.

## **Global Summary “Country Profile Selection Centre”**

(<http://www-nt.who.int/vaccines/globalsummary/Immunization/CountryProfileSelect.cfm>)

On this page the reader can select a country and view an “Immunization Profile” for that country, which includes information on population, disease incidence, vaccine coverage, and the routine schedule.
